STUDY OVERVIEW:	<p>Smartphones and mobile unified communications are enabling nurses, physicians, ancillary workers, and medical support staff to streamline communications, improve team-based collaboration, and enhance care coordination across the healthcare continuum.</p> <p>The Joint Commission, the nation's predominant standards-setting and accrediting body, identified the primary root cause of more than 70 percent of treatment delays and sentinel events as being caused by a breakdown in communications. They also identified improved staff communications as a National Patient Safety Goal for hospitals in 2010.^{1,2}</p> <p>Nurses are the single largest healthcare professional group in the United States with 3.13 million registered members.³ They are mobile professionals who are constantly on the go working in high-stress, data-intensive environments dominated by inefficient paper-based processes. They have a constant need for direct and immediate communications with colleagues and patients, as well as real-time access to relevant patient information at point of care.</p> <p>With the transition toward patient centered care models and value-based purchasing, leading hospitals surveyed are evaluating and making investments in Smartphones and mobile unified communications systems to help achieve the Triple AIM by improving care quality and outcomes, reducing healthcare delivery costs, and increasing patient and provider satisfaction.</p> <p>Hospital IT investment priorities are pivoting toward mobile communications. Seventy-one percent of hospitals surveyed regard mobile communications as an emerging investment priority driven by the adoptions of new patient centered care models and value-based purchasing.</p> <p>Large-scale enterprise-wide deployments are focusing on the mobile hospital worker. Thirty-eight percent of hospitals surveyed had invested in a Smartphone-based communications platform to support clinical communications with an average size deployment of 624 devices. Fifty-two percent of them have expanded their deployments beyond clinical messaging to support other mobile hospital workers.</p> <p>Hospital IT anxious about growing cybersecurity threats. Eighty-two percent of hospitals surveyed expressed grave concerns about their ability to support and protect mobile devices, patient data, and hospital's technology infrastructure as a result of the growing threat of cybersecurity attacks.</p>

<p>STUDY METHODOLOGY</p>	<p>Point of Care Communications for Nursing 2016 presents the findings of an end-user market study focused on the current state of mobile communications adoption by nurses across the United States. The report uncovers strong opinions regarding the market opportunities and challenges for hospitals and health systems who are considering large-scale deployments of Smartphones and mobile unified communications to help nurses, physicians, ancillary care workers, and medical support staff to streamline communications, improve team-based collaboration, and enhance care coordination across the healthcare continuum.</p> <p>Point of Care Communications for Nursing 2016 is an outgrowth of a similar study published by Spyglass in March 2014 entitled Point of Care Communications for Nursing 2014.</p> <p>Content for Point of Care Communications for Nursing 2016 was derived from more than 100 in-depth interviews with IT and healthcare professionals working in hospital-based environments who are technically competent and representative of a broad range of medical specialties, organization types, and organization sizes.</p> <p>The telephone interviews were conducted over a three-month period starting in March 2016. The purpose of the interviews was to identify the needs and requirements for communications at point of care through discussions about:</p> <ul style="list-style-type: none"> • existing workflow inefficiencies in communicating with care team members, • current usage models for mobile communications devices and solutions, and • barriers for widespread mobile communications adoption. <p>Spyglass also evaluated key vendor product offerings and identified early adopter organizations that have successfully deployed these solutions.</p>
<p>TARGET AUDIENCE</p>	<ul style="list-style-type: none"> • Software and hardware vendors, systems integrators and management consulting groups who are selling hardware, applications and services into the healthcare industry • Healthcare administrators and IT executives who are making strategic decisions to fund clinical information technology solutions • Clinicians who are involved in informatics and clinical system evaluation and selection • Investment banking and private equity investors

ABOUT SPYGLASS
CONSULTING
GROUP

Spyglass Consulting Group is a market intelligence firm and consultancy focused on the nexus of information technology and healthcare. Spyglass offers products and services in customer and market intelligence, strategic partnership development, product marketing and investment due diligence. Spyglass' current research is entitled **Healthcare without Bounds** that focuses on the current and future potential of mobile computing and wireless technologies within the healthcare industry.

Spyglass customers include more than 140 leading high technology vendors, management consulting organizations and healthcare providers including **Cisco, IBM, Microsoft, Intel, Hewlett Packard, Johnson & Johnson, Pfizer, Siemens, GE Healthcare, Philips Medical, Sprint, and Kaiser Permanente.**

Gregg Malkary is the **founder** and **Managing Director** of **Spyglass Consulting Group**. He has more than 20 years experience in the high technology industry working with Fortune 2000 companies to help them use information technology for competitive advantage. Malkary has domain expertise in mobile computing, wireless and broadband technologies with direct experience in the healthcare, hospitality, manufacturing, communications and entertainment markets.

Prior to founding **Spyglass Consulting Group** in August 2002, Malkary was an Associate Partner at **Outlook Ventures**, a venture capital firm focused on early stage investments in enterprise software and communications companies. Previously, Malkary was the Director of Strategic Planning for **Exodus Communications** where he was responsible for identifying, evaluating and executing growth initiatives for Exodus in the managed web-hosting marketplace. Malkary has also held consulting and senior management roles in business development, strategic planning and product marketing for public and private technology companies including **IBM, Hewlett Packard, Accenture, Silicon Graphics** and **Skytel Communications**.

Malkary frequently speaks at regional and national conferences focused on mobile computing, wireless technologies and healthcare related issues. Numerous industry publications have written about and quoted Malkary including the *Wall Street Journal*, *CIO*, *Business 2.0*, *MIT Technology Review*, *Network World* and *eWeek*.

Malkary is an honors graduate of **Brown University** having earned a MS and BA in Computer Science. He was awarded the prestigious North American Philips Corporation Fellowship for his graduate research work in graphical simulation environments.

- IN THIS STUDY.....6**
- METHODOLOGY..... 6**
- TARGET AUDIENCE 6**
- INTRODUCTION..... 7**
- EXECUTIVE SUMMARY..... 8**
- LONGITUDINAL COMPARISONS WITH 2014 STUDY..... 10**
- DEMOGRAPHICS 13**
- ACKNOWLEDGEMENTS 19**
- MARKET SURVEY RESULTS21**
- COMMUNICATIONS CHALLENGES 21**
 - What challenges do nurses face when communicating with physicians and team members? 21
- COMMUNICATIONS INVESTMENTS 26**
 - Investment Priorities 26
 - Are mobile communications a top investment priority for hospital IT? 26
 - Return on Investment..... 28
 - Is there a compelling ROI for mobile communications investments? 28
 - Mobile Strategies 31
 - Have hospitals developed enterprise-wide mobile communications strategies? 31
 - Mobile Device Investments 33
 - Has hospital IT invested or plan to invest in Smartphone-based communications? 33
 - How many Smartphones has hospital IT deployed? 35
 - Which mobile workers were targeted for Smartphone usage? 36
- COMMUNICATIONS DEVICES..... 37**
 - Mobile Devices 37
 - What is the primary communications device used by a staff nurse? 37
 - Vendors: Which VoIP handset vendor has hospital IT deployed?..... 39
 - Are staff nurses carrying multiple devices to support clinical communications? 42
 - Smartphones 43
 - Is Smartphone the ideal device to support clinical communications?..... 43
 - Is hospital IT ready to deploy consumer-grade Smartphones?..... 48
 - Vendors: Which Smartphone vendor has hospital IT deployed? 49
 - Do Smartphones pose an infection control risk at point of care?..... 50
- COMMUNICATIONS APPLICATIONS..... 52**
 - Vendors: Which Smartphone-based communications platform has hospital IT deployed? 52

Which Smartphone-based applications are staff nurses using?..... 53

Are Smartphones being used to capture digital images and video? 57

COMMUNICATIONS INFRASTRUCTURE..... 58

Security 58

 Are Smartphones adequately secured to protect patient health information? 58

 Has hospital IT deployed mobile device management solutions? 60

 Vendors: Which mobile device management solution has hospital IT deployed?..... 61

Systems Integration..... 63

 Has middleware been deployed to integrate with legacy systems and medical devices? 63

 Vendors: Which middleware vendor has hospital IT deployed? 64

 Which types of alerts, alarms and notifications are nurses receiving on mobile devices? 65

Analytics and Reporting..... 66

 Are analytics used to measure communications usage and effectiveness? 66

Wireless Network 69

 Is the hospital WLAN reliable to support mobile voice and data? 69

Technical Support..... 71

 Does hospital IT have dedicated personnel to support mobile technologies? 71

HOSPITAL POLICIES 73

Personally-Owned Devices 73

 Are nurses using personal devices to support clinical communications? 73

 Which applications are nurses using on personal devices? 75

 Do hospital policies allow nurses to use personal devices during their shift? 76

 Is hospital IT aware of widespread personal device usage? 77

BYOD (Bring Your Own Device) Programs 78

 Are staff nurses allowed to participate in hospital sponsored BYOD program?..... 78

RECOMMENDATIONS 80

CONCLUSIONS 82
